Rainforest Weather: Sunny and Wet

Shortened Lesson - Free Sample

EdTechLens

Content in this lesson pack is excerpted from the Rainforest Journey digital life science core curriculum program created by EdTechLens. The same material that appears in this free sample appears within a full lesson of the same name found on this site as well as in a larger unit pack.

The full program contains additional content and features, including primary sources, links to primary sources within lessons, automatic corrections for unit assessments, data analytics, problem-based learning activities, additional NGSS alignments, and teacher resources. Learn more at www.edtechlens.com.

Heavy Rain in Rainforest

Frog by Waterfall

Water is very important in the rainforest. Animals need it to live. Plants need it to grow. People in the rainforest need water to live, too!

The rainforest is a rainy place. More rain falls in rainforests than nearly anywhere else! It rains there almost every day. Water drips from the trees. There are rivers and streams where the animals drink.

When it’s not raining it’s sunny and light.

The Importance of Water to the Rainforest

Who needs water in the rainforest?

Draw two pictures below to show who needs water in the rainforest.

Learning Standards

Next Generation Science Standards Addressed in Lesson Pages

This content sample is extracted from a larger lesson pack available on this site of the same name so not all standards shown here are covered in this free sample.

In-grade standards for grade 5

ESS3.A Natural Resources
ESS2.D Weather and Climate
LS1.C Organization for Matter and Energy Flow in Organisms

ELA Standards and NGSS Performance Expectations Addressed in Chapter Review

RI.K.1 With prompting and support, ask and answer questions about key details in a text. (K-ESS2-2)

For information about larger unit lesson packs, search this site for document named: Contents List for Unit Lesson Packs
